

INNOVATIONS FOR LIVING™

VENTSURE® 4' RIGID STRIP EXTERNALLY BAFFLED RIDGE VENTS

For an efficient roofing system, it's essential that the attic stay dry and cool. You can create this environment by using VentSure® 4' Rigid Strip Externally Baffled Ridge Vents in combination with undereave soffit vents. Together they allow the natural flow of outside air up into the attic—and back out again. Without this system, moisture can reduce the effectiveness of your insulation, causing rotting or mildew on wood surfaces, drywall damage, peeling paint or warped siding.

Features and benefits of VentSure® 4' Rigid Strip Externally Baffled Ridge Vents:

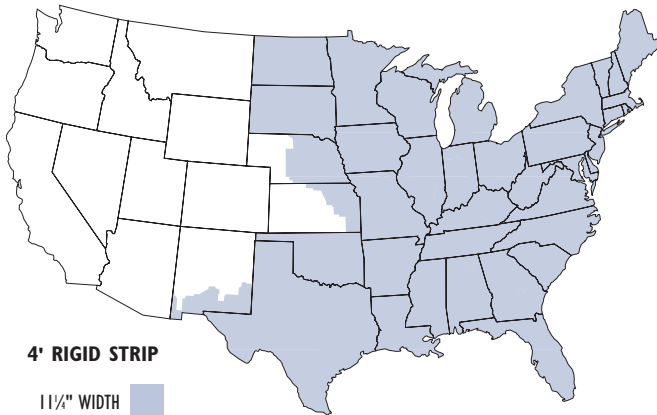

- Net free vent area: 17 sq. in. per lineal ft. (68 sq. in. per 4 ft. section)
- Externally baffled for added protection against the elements
- Year-round protection and consistent ventilation without moving parts or energy consumption
- Shingle-over width of 11¼" to accommodate a standard ridge cap shingle—overall width 13½"
- Easy-to-handle 4' sections
- Long-lasting 20-Year Limited Warranty*
- No end caps required
- Unique design works with almost any roof pitch (3/12 to 16/12)

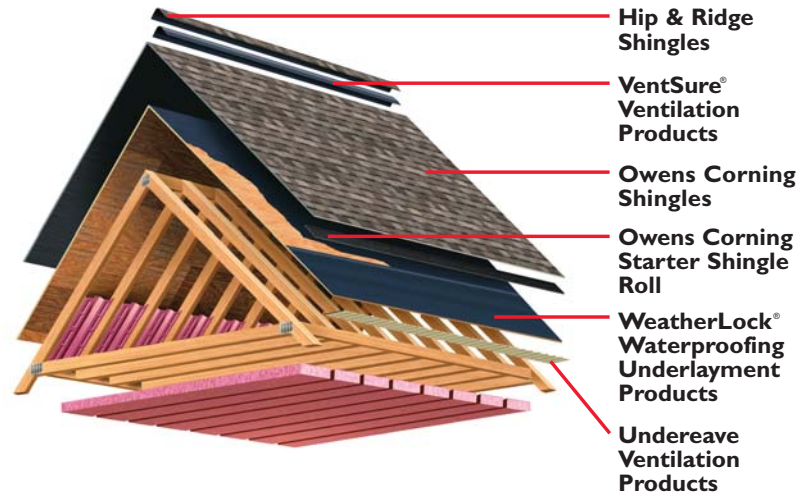

* See actual warranty for complete details, limitations and requirements.
